

Practical 2 (Try it Out)

Create a new variable

- 1) Read in the birthweight data
- 2) Create a new variable `lbw` with these conditions
 - if `bweight<2500` then `lbw` is `Weight<2500`
 - if `bweight>=2500` then `lbw` is `Normal 2500+`

GGplot

- 1) Do a boxplot of `lbw` vs `gestwks` and use classic theme
- 2) Do a boxplot of `lbw` vs `gestwks` and use classic theme and `facet` by `agegrp`
